

SHOPPYMINT AIRDROP

What is Airdrop and how does it work?

Airdrop is a cryptocurrency distribution method that allows users to receive free tokens from a Shoppymint ICO. It works by sending new tokens to cryptocurrency wallets. These new tokens are then automatically distributed to the user's Shoppymint wallet.

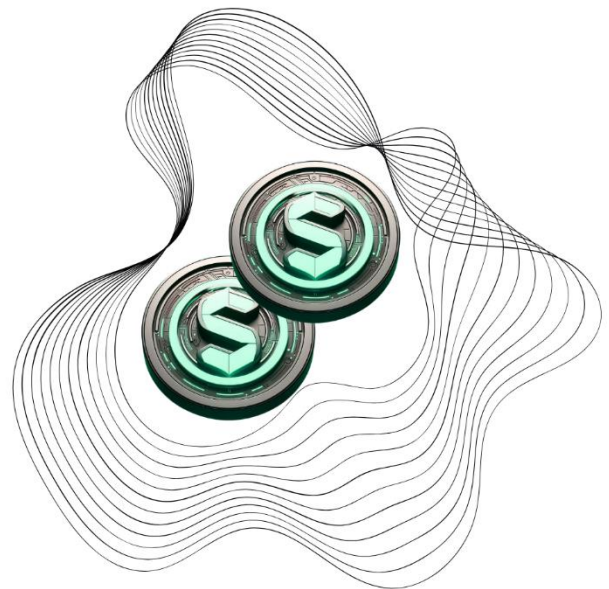

Holder Airdrop

In the holder airdrop, tokens are distributed to investors who hold 20,000 or more tokens (KYC required). Only certain amounts may be available during these events, so participating early is advantageous!

Premium Airdrop

If you're looking to get ahold of some extra Shoppymint Tokens, participating in the Premium Airdrop is a great way to do it. Every Sunday until the end of the ICO presale, anyone who holds at least 100,000 SMT Tokens will enter into a drawing to receive a significant airdrop of additional tokens. The more SMT Tokens you hold, the better your chances are of winning - so if you're looking to give yourself a boost, now's the time to start accumulating those tokens.

Airdrops are dropped every Sunday.
